

Architects all over the world trust in glass technology from Interpane.

Architects and planners can give free rein to their sense of creativity. With modern construction materials anything is virtually possible; even the most outrageous ideas can be realized in an economical and ecological sustainable way. One of the fundamentals of transmitting light and life into the building being planned, is the appliance of the right glazing technology.

Thanks to an extended range of high-tech functional glazing, Interpane offers the ideal solution for all types of architecture. Glass generates a better life quality to all types of buildings, whether residential, commercial or industrial. Even though their interiors are flooded with natural light, our high effective functional coatings keep these buildings ideal energy savers. Glass meets the most exact specifications and as the distinctive commanding architectural element it also radiates a timeless beauty.

All over the world, renowned architects trust in Interpane; with our international marketing and sales network we are always in reach. We have become an experienced partner in this sector, developing and manufacturing products designed especially to satisfy the needs of building commissioners, planners and architects. We are at the origin of precise and sustainable solutions even if the challenge is unusual. We are always pleased to support your projects from the planning phase right through to final implementation.

High-end solar control glass

Thermal insulation glass
