

ipadecor P

Photo-laminated glass

Virtually opaque -
translucent - transparent

ipadecor P turns glass into a unique and distinctive image medium. The lamination procedure integrates photographs between glass – brilliant and colour-fast.

A new force in interior design work

ipadecor P turns a photograph into a genuine eye-catcher and brings new, creative impetus to interior design.

As a unique medium for image display, both in the private and the commercial sectors, as wall cladding or partition wall, as facing for a splash back or lamp, ipadecor P - thanks to its brilliant surface - guarantees image reproduction that is sharp in every detail, bright and brilliant - and not only in rectangular but in every conceivable geometric form.

Virtually opaque, translucent, fully transparent

ipadecor P is available in three variants with different levels of transparency. For all areas not requiring a clear, transparent view, there is the nearly opaque version.

The translucent version is suitable for backlighting; the decorative image or motif, externally backlit, then functions as an indirect source of light. Where the photographic image is to be seen from both sides the fully transparent version can be used.

Technical data:

- Available as annealed glass / toughened safety glass / heat strengthened glass
- Laminated glass from 8/2 to 24/2 (without safety rating)
- Maximum size 1000 mm x 3000 mm
- Minimum size 200 mm x 300 mm
- Maximum weight 120 kg

Product variants:

- Other applications available on request
