

# **ipadecor R**

Dichroic glass -  
for a play of colours that  
is simply extraordinary

Decorative and artistic applications

ipadecor R composite glass lends interior spaces an unimagined depth and opens up completely new perspectives for interior design. Depending on the observer's viewing angle, different and changing colours are reflected and perceived.

The creative possibilities are virtually unlimited; the space inside a room can be experienced in exciting new ways.

### Playing with interior space

The effects are as simple as they are stunning. Interior space, viewed through ipadecor R dichroic composite glass, changes in terms of colour, depth, and contrast - in much the same way as through polarizing sunglasses. As the observer changes position so the view changes too; the effect can be highly creative.

ipadecor R thus turns glass - in a simple, purist, and direct way - into a defining structural element in its own right, meeting the most demanding aesthetic requirements and lending interior space an utterly unique tone.

### Virtually unlimited combination possibilities

ipadecor R dichroic glass can be used in many different ways; it blocks out virtually all UV radiation. It can be used in combination with various coloured films to achieve unusual and unique dichroic colour effects.

ipadecor R is ideally suited, for example, for all types of decorative and artistic applications - as a room partition, for lamp facing, or as door panelling.

### Features:

This material is available in several variants

- It can be further processed as laminated glass
- It is UV-stable; it blocks out virtually all UV radiation
- The geometric form can be freely selected
- Various dichroic colour effects can be achieved

### Technical data:

- Laminated glass structures from 8/2 to 24/2
- Available as float glass / toughened safety glass / heat strengthened glass
- 1400 mm (width) x 4000 mm (maximum length)
- Weight up to maximum 120 kg

### Product variants:

- Laminated glass only
- Other applications available on request
